Photoshop Overlays

CityTurtles

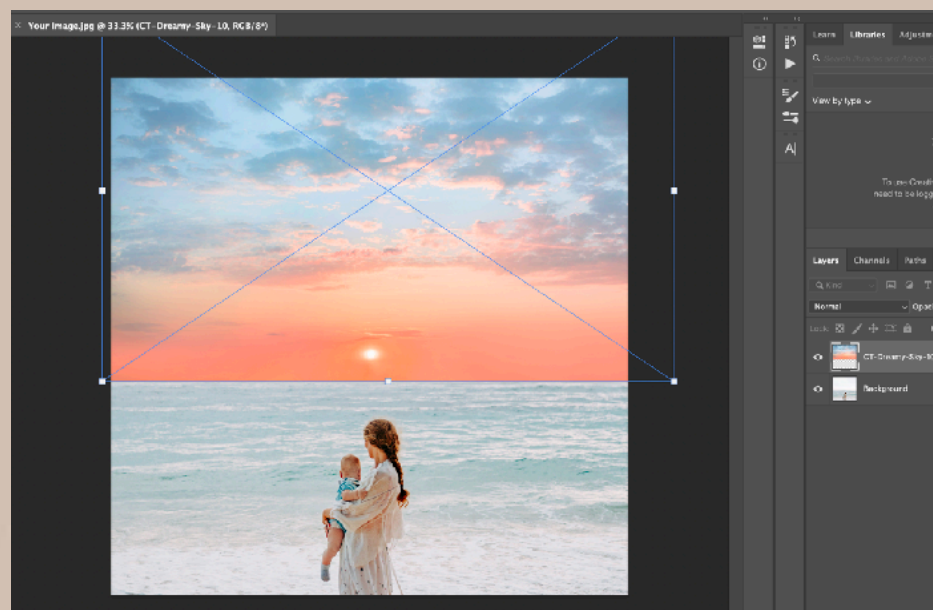

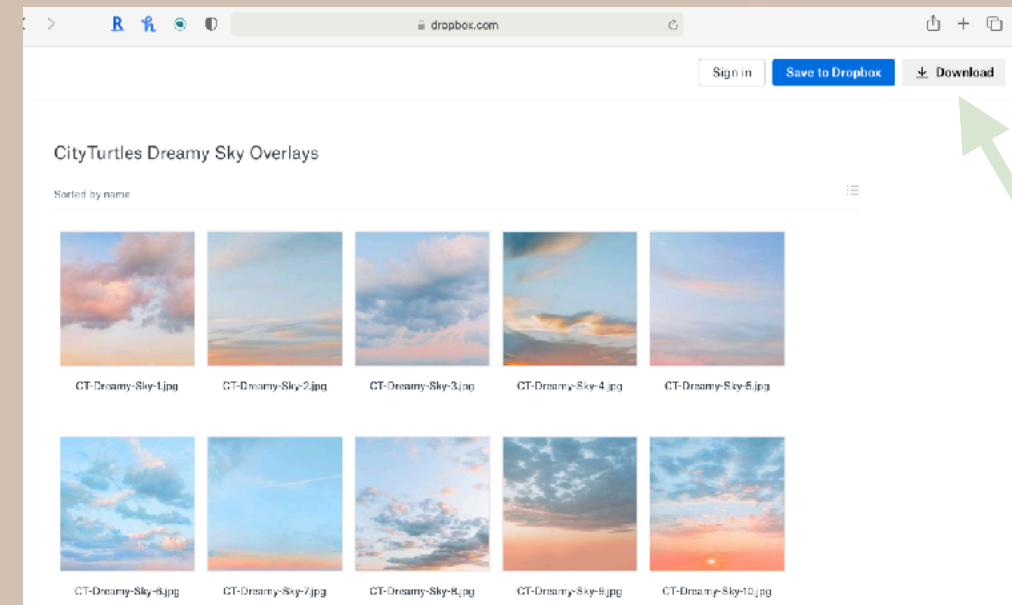

# HOW TO USE

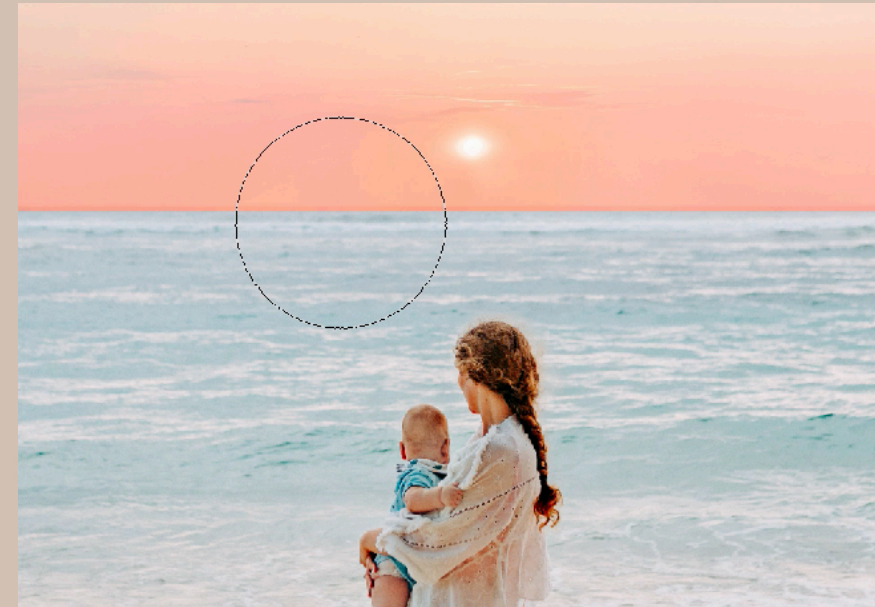

Thank you for purchasing my overlays! I poured my heart + soul into creating these and designed this step-by-step guide to teach you the ins and outs of overlays. Happy editing!

Step 1.) **Download** the files from Google Drive. If you're on your phone: open the link, select all of the files, press Export, and click Save Images.

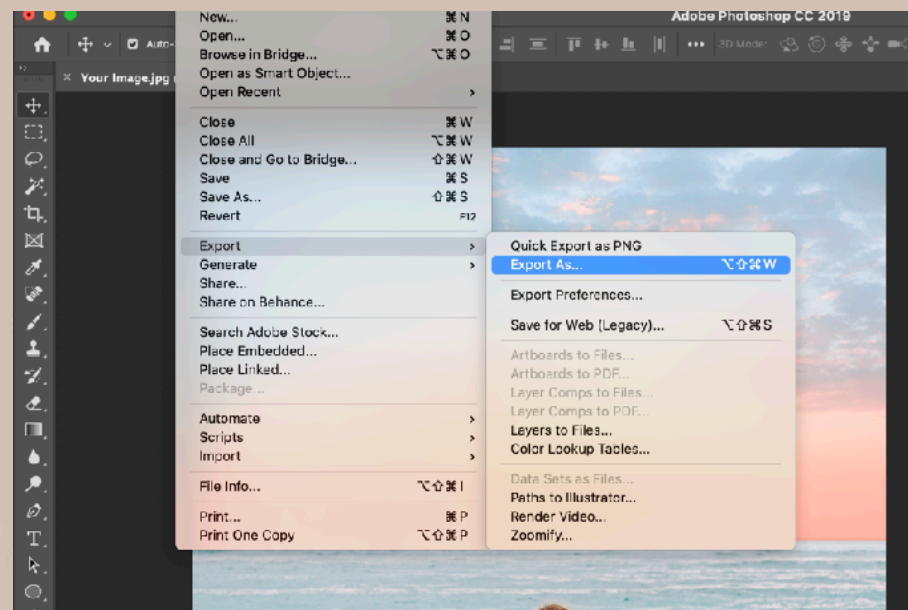

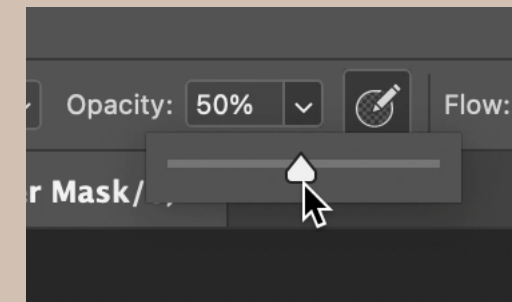

Step 2.) **Open** Adobe Photoshop with the image you want to edit. Select an overlay and place it on top of your image. Stretch the overlay to cover your entire image.

Step 3.) Click the **Mask** icon (it looks like a rectangle with a hole) Hit the letter 'B' on your keyboard then brush away the specks you don't want!

Add Layer Mask

Lower the opacity slider to blend the sky in better

Step 4.) Time to **export** your image! Go to File > Export > then choose an export option. You're done! Time to show off your masterpiece to your clients!
